Powder Technology 95 (1998) 277–280

POWDER TECHNOLOGY

Subject Index of Volume 95

Acid–base properties
  acid–base properties of silicas modified by organic compounds as determined by inverse gas chromatography, 103
Adhesion
  effect of interparticle adhesion forces on elutriation of fine powders from a fluidized bed of a binary particle mixture, 93
Arching
  an experimental study on the mechanics of arching in hoppers connected to a moving bed with negative pressure gradient, 143
Attrition
  specific energy consumption and particle attrition in pneumatic conveying, 1
  modelling attrition of limestone during calcination and sulfation in a fluidized bed reactor, 119

Bed diameter
  entrainment of FCC from fluidized beds — a new correlation for the elutriation rate constants $K^*_{i\infty}$, 240
Binary particle mixtures
  effect of interparticle adhesion forces on elutriation of fine powders from a fluidized bed of a binary particle mixture, 93
Blast furnaces
  entrainment of fine particles with upward gas flow in a packed bed of coarse particles, 265
Bubbles
  bubble size control in a two-dimensional fluidized bed using a moving double plate distributor, 205

Calcination
  modelling attrition of limestone during calcination and sulfation in a fluidized bed reactor, 119
Chalcocite
  influence of ethyl xanthate on the wettability and surface free energy of synthetic chalcocite, 234
Chaos analysis
  fluidization regimes and transitions from fixed bed to dilute transport flow, 185
Circulating beds
  cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Clusters
  cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Combustion synthesis
  reaction rate of combustion synthesis of an intermetallic compound, 175
Comminution
  the effect of heating and quenching on grinding characteristics of quartzite, 137
  the modelling of grinding processes by means of the principle of maximum entropy, 248
Compression
  microscopic analysis on the consolidation process of granule beds, 214

Conductivity
  application of electrical resistance tomography to detect deposition in hydraulic conveying systems, 61
Consolidation
  microscopic analysis on the consolidation process of granule beds, 214
Contact angle
  influence of ethyl xanthate on the wettability and surface free energy of synthetic chalcocite, 234
Conveying
  specific energy consumption and particle attrition in pneumatic conveying, 1
  a simulation system for pneumatic conveying systems, 7
  prediction of pneumatic conveying flow phenomena using commercial CFD software, 37
  concentration profiles in a gravity chute conveyor by optical tomography measurement, 49
  wear in pneumatic transport under hot reducing atmospheres, 55
Correlation
  solids friction factors in upward, lean gas–solids flows, 25

Data conversion
  the conversion of sedigraph size distributions to equivalent sub-sieve screen size distributions, 109
Deformation characterization
  microscopic analysis on the consolidation process of granule beds, 214
Dense phase
  experimental characterization of the pressure drop in dense phase pneumatic transport at very low velocity, 165
Direct simulation Monte Carlo method
  cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Discrete particle simulation
  cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Distributors
  bubble size control in a two-dimensional fluidized bed using a moving double plate distributor, 205
Drying
  drying of wet solid particles in a steady-state one-dimensional flow, 15

Elutriation
  effect of interparticle adhesion forces on elutriation of fine powders from a fluidized bed of a binary particle mixture, 93
  entrainment of FCC from fluidized beds — a new correlation for the elutriation rate constants $K^*_{i\infty}$, 240
Entrainment
  entrainment of FCC from fluidized beds — a new correlation for the elutriation rate constants $K^*_{i\infty}$, 240
Entropy
  the modelling of grinding processes by means of the principle of maximum entropy, 248

Elsevier Science S.A.

Fines
entrainment of fine particles with upward gas flow in a packed bed of coarse particles, 265
Flotation
influence of ethyl xanthate on the wettability and surface free energy of synthetic chalcocite, 234
Flow functions
an experimental study on the mechanics of arching in hoppers connected to a moving bed with negative pressure gradient, 143
Flow mixing
roping phenomena in pulverized coal conveying lines, 43
Fluidization regime diagrams
fluidization regimes and transitions from fixed bed to dilute transport flow, 185
Fluidized beds
effect of interparticle adhesion forces on elutriation of fine powders from a fluidized bed of a binary particle mixture, 93
fluidization regimes and transitions from fixed bed to dilute transport flow, 185
bubble size control in a two-dimensional fluidized bed using a moving double plate distributor, 205
origin, propagation and attenuation of pressure waves in gas–solid fluidized beds, 220
entrainment of FCC from fluidized beds — a new correlation for the elutriation rate constants $K_{i\infty}^{*}$, 240
cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Friction
solids friction factors in upward, lean gas–solids flows, 25

Gas–solid flow
a simulation system for pneumatic conveying systems, 7
solids friction factors in upward, lean gas–solids flows, 25
origin, propagation and attenuation of pressure waves in gas–solid fluidized beds, 220
entrainment of fine particles with upward gas flow in a packed bed of coarse particles, 265
Granules
microscopic analysis on the consolidation process of granule beds, 214
Gravity chute conveyors
concentration profiles in a gravity chute conveyor by optical tomography measurement, 49
Grindability
the effect of heating and quenching on grinding characteristics of quartzite, 137
Grinding
the modelling of grinding processes by means of the principle of maximum entropy, 248

Head loss
comparison between pressure drop in horizontal and vertical pneumatic conveying pipelines, 67
High-temperature erosion wear
wear in pneumatic transport under hot reducing atmospheres, 55
Hold-up
entrainment of fine particles with upward gas flow in a packed bed of coarse particles, 265
Hoppers
an experimental study on the mechanics of arching in hoppers connected to a moving bed with negative pressure gradient, 143
Hydraulic conveying
application of electrical resistance tomography to detect deposition in hydraulic conveying systems, 61
Hydrogen storage alloys
reaction rate of combustion synthesis of an intermetallic compound, 175

Image processing
bubble size control in a two-dimensional fluidized bed using a moving double plate distributor, 205
Injectors
numerical calculation methods for solids injectors, 75
Intermetallic compounds
reaction rate of combustion synthesis of an intermetallic compound, 175
Inverse gas chromatography
acid–base properties of silicas modified by organic compounds as determined by inverse gas chromatography, 103

Kinetics
reaction rate of combustion synthesis of an intermetallic compound, 175
Kolmogorov entropy
fluidization regimes and transitions from fixed bed to dilute transport flow, 185

Limestone
modelling attrition of limestone during calcination and sulfation in a fluidized bed reactor, 119
Load cell tests
the effect of heating and quenching on grinding characteristics of quartzite, 137
Low velocity transport
experimental characterization of the pressure drop in dense phase pneumatic transport at very low velocity, 165

Modelling
the modelling of grinding processes by means of the principle of maximum entropy, 248
Modifiers
acid–base properties of silicas modified by organic compounds as determined by inverse gas chromatography, 103

Numerical methods
numerical calculation methods for solids injectors, 75
Numerical simulation
prediction of pneumatic conveying flow phenomena using commercial CFD software, 37

Optical tomography
concentration profiles in a gravity chute conveyor by optical tomography measurement, 49

Packed beds
entrainment of fine particles with upward gas flow in a packed bed of coarse particles, 265
Particle dynamics analyzer
to characterize two-phase flows around a finned tube using the three-dimensional particle dynamics analyzer (PDA) and numerical calculation, 129
Particle–particle collision
cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Particle transport
relative motion between phases of a particulate suspension, 153
Phase Doppler anemometry
relative motion between phases of a particulate suspension, 153
Pipeline design
a simulation system for pneumatic conveying systems, 7
Pipelines
comparison between pressure drop in horizontal and vertical pneumatic conveying pipelines, 67
sensor systems for lightly loaded pneumatic conveyors, 79

Pneumatic conveying
specific energy consumption and particle attrition in pneumatic conveying, 1
a simulation system for pneumatic conveying systems, 7
drying of wet solid particles in a steady-state one-dimensional flow, 15
prediction of pneumatic conveying flow phenomena using commercial CFD software, 37
roping phenomena in pulverized coal conveying lines, 43
concentration profiles in a gravity chute conveyor by optical tomography measurement, 49
wear in pneumatic transport under hot reducing atmospheres, 55
comparison between pressure drop in horizontal and vertical pneumatic conveying pipelines, 67
numerical calculation methods for solids injectors, 75
sensor systems for lightly loaded pneumatic conveyors, 79
experimental characterization of the pressure drop in dense phase pneumatic transport at very low velocity, 165
Potassium ethyl xanthate
influence of ethyl xanthate on the wettability and surface free energy of synthetic chalcocite, 234
Pressure drop
solids friction factors in upward, lean gas–solids flows, 25
comparison between pressure drop in horizontal and vertical pneumatic conveying pipelines, 67
experimental characterization of the pressure drop in dense phase pneumatic transport at very low velocity, 165
Pressure fluctuations
fluidization regimes and transitions from fixed bed to dilute transport flow, 185
Pressure gradient
an experimental study on the mechanics of arching in hoppers connected to a moving bed with negative pressure gradient, 143
Pressure waves
origin, propagation and attenuation of pressure waves in gas–solid fluidized beds, 220
Pulsed flow
bubble size control in a two-dimensional fluidized bed using a moving double plate distributor, 205

Quartzite
the effect of heating and quenching on grinding characteristics of quartzite, 137

Roping
roping phenomena in pulverized coal conveying lines, 43

Screen size distribution
the conversion of sedigraph size distributions to equivalent sub-sieve screen size distributions, 109
Sedigraph size distribution
the conversion of sedigraph size distributions to equivalent sub-sieve screen size distributions, 109
Sensors
sensor systems for lightly loaded pneumatic conveyors, 79
Separation
to characterize two-phase flows around a finned tube using the three-dimensional particle dynamics analyzer (PDA) and numerical calculation, 129
Separators
to characterize two-phase flows around a finned tube using the three-dimensional particle dynamics analyzer (PDA) and numerical calculation, 129
Silica surface modification
acid–base properties of silicas modified by organic compounds as determined by inverse gas chromatography, 103
Size distributions
the conversion of sedigraph size distributions to equivalent sub-sieve screen size distributions, 109
the modelling of grinding processes by means of the principle of maximum entropy, 248
Solids friction factor
solids friction factors in upward, lean gas–solids flows, 25
Solid–solid reactions
reaction rate of combustion synthesis of an intermetallic compound, 175
Sorbents
modelling attrition of limestone during calcination and sulfation in a fluidized bed reactor, 119
Specific energy
specific energy consumption and particle attrition in pneumatic conveying, 1
Standpipes
an experimental study on the mechanics of arching in hoppers connected to a moving bed with negative pressure gradient, 143
Sulfation
modelling attrition of limestone during calcination and sulfation in a fluidized bed reactor, 119
Superficial gas velocity
entrainment of FCC from fluidized beds — a new correlation for the elutriation rate constants $K^*_{fc\infty}$, 240
Surface characterization
acid–base properties of silicas modified by organic compounds as determined by inverse gas chromatography, 103
Surface free energy
influence of ethyl xanthate on the wettability and surface free energy of synthetic chalcocite, 234
Suspensions
application of electrical resistance tomography to detect deposition in hydraulic conveying systems, 61
relative motion between phases of a particulate suspension, 153

Thermal treatment
the effect of heating and quenching on grinding characteristics of quartzite, 137
Tomography
application of electrical resistance tomography to detect deposition in hydraulic conveying systems, 61
sensor systems for lightly loaded pneumatic conveyors, 79
Transport
drying of wet solid particles in a steady-state one-dimensional flow, 15
Two-fluid model
cluster patterns in circulating fluidized beds predicted by numerical simulation (discrete particle model versus two-fluid model), 254
Two-phase flow
comparison between pressure drop in horizontal and vertical pneumatic conveying pipelines, 67
numerical calculation methods for solids injectors, 75
sensor systems for lightly loaded pneumatic conveyors, 79
to characterize two-phase flows around a finned tube using the three-dimensional particle dynamics analyzer (PDA) and numerical calculation, 129
relative motion between phases of a particulate suspension, 153
origin, propagation and attenuation of pressure waves in gas–solid fluidized beds, 220

Velocimetry
relative motion between phases of a particulate suspension, 153

Wave attenuation
origin, propagation and attenuation of pressure waves in gas–solid fluidized beds, 220

Wave propagation
origin, propagation and attenuation of pressure waves in gas–solid fluidized beds, 220
Wear
wear in pneumatic transport under hot reducing atmospheres, 55
Wettability
influence of ethyl xanthate on the wettability and surface free energy of synthetic chalcocite, 234
Yield value
microscopic analysis on the consolidation process of granule beds, 214
